

Visibility to the Heart of your Enterprise

myAsset is a web-based system that harness the powers of Internet to provide high volume, multi-sites application.

Organisations no longer have to be constraint by the size of their LAN. They can make use of this system to maintain a central database, while allowing access by users from any departments, centres or remote sites. Authorised users can log in anywhere where they have internet access, even from the comfort of their home.

The system allows the creation of multiple centers or business units. This allows individual centers to manage their own assets, while under the umbrella of the central command. Organisations will be glad to know that while individual centers still holds responsibility over their assets, the organisation HQ can have a wide helicopter view of their entire assets.

ASSET ID	DESCRIPTION	CENTER	DEPARTMENT	PURCHASE DATE	LOCATION

ASSET LIFE CYCLE MANAGEMENT

myAsset's Enterprise Asset Management combines with 10 other modules to provide a complete Asset Life Cycle Management. The additional modules from mobile tracking to purchasing to stock control allows organizations to pick the right features that address their unique business challenges.

Features

- 1 Individual division/department control**
 Assets are sorted by divisions and departments to facilitate procurement and control. User access is also limited to their own division/departments so as to eliminate discrepancy arising from shared access of the entire asset database.
- 2 Multi Level User Access & password security**
 User access rights to view, add, edit or delete can be determined by the assigned access level. Individual functionality access control can also be set by the System Administrator.
- 3 Audit Trail**
 This feature trails the user access, tracking their every moves, giving the System Administrator the ability to exercise more control in tracking activities of the system, especially unauthorized transactions.
- 4 Search and Print**
 Users can search and manage a set of assets using a combination of conditions. From the search list, users can also print the range of asset labels on any printers.
- 5 User defined fields**
 Over hundreds of selectable and user defined fields that can accurately describe an asset, giving users absolute flexibility and power to decide.
- 6 Main Category / Sub Category Classification**
 An asset class can be further sub-categorized to classify the relationship between them. For e.g. IT assets can be sub-categorized into its sub categories like PC, projector.....etc.
- 7 Report Generator**
 A comprehensive reporting module that allows users to either select from the list of standard reports or customized their own. Users can specify multiple search conditions to distinctively extract out the desired contents.
- 8 Data Export/Import**
 Flexible export capabilities to commonly used formats (Excel, Text, etc) provides compatibility and easy integration with other systems and mainframes.
- 9 Auto Generate Asset ID and Barcode Labels**
 The system automatically generates barcode labels with Asset ID simultaneously using desktop or mobile printers, giving individual asset a unique identification on the spot.
- 10 Backup Database**
 Users can backup and restore the database or perform periodic scheduled backup easily.
- 11 Links with Mobile Tracking Module**
 The PDA application provides mobility in transferring, monitoring, tracking and stock-taking assets with instant information and verification on the handheld PDA barcode scanner.
- 12 Other features**
 Asset lifecycle report, asset transfer, asset duplication.....etc. There are so many other features that empowers users to track their assets effectively.
